Detailed action

Reasons for allowance

The following is an examiner's statement of reasons for allowance: The prior art of record does not teach or suggest a radiopaque, implantable biomaterial device, comprising:

a bioabsorbable collagenous biomaterial including a plurality of collagenous strips that are bonded to one another to form a layered structure, wherein said collagenous strips comprise tunica submucosa tissue from a warm-blooded vertebrate tissue source and said collagenous biomaterial is effective to promote remodeling of tissue of a patient at a site at which said collagenous biomaterial is implanted, and wherein said strips are bonded to one another by using sutures, staples, or biocompatible adhesives or by dehydrating overlapping strips, said layered structure including a first collagenous strip having a surface opposing a surface of a second collagenous strip; and a radiopaque marker positioned and completely contained between said opposing surfaces of said first collagenous strip and said second collagenous strip.

Withdrawn rejections in response to Applicants' amendments

Claim Rejections - 35 USC § 103

The previous rejection of claims 54-60, 62, 66 and 67 under 35 USC § 103 as being unpatentable over Badylak et al., (US Patent No. 6,099,567, effective priority filing date, 10 December 1996) in view of Stinson et al., (US 2004/0111149 A1, Date of filing August 1, 1997) has been withdrawn in view of Applicants' amendment to claims 54 and 67.

Note that the combined disclosure of Badylak et al., and Stinson et al., does not teach or suggest of a radiopaque, implantable biomaterial device, comprising a radiopaque marker positioned and completely contained between the opposing surfaces of a first collagenous strip and a second collagenous strip. Accordingly, a radiopaque marker that is diffused or not completely enclosed between the opposing surfaces of said first collagenous strip and said second collagenous strip will not fall within the scope of the claimed invention. Also note that a radiopaque marker positioned and completely contained between the opposing surfaces of said first collagenous strip and said second collagenous strip should not be reasonably expected to be released from the implant as the bioabsorbable material degrades into the systemic circulation as easily as the radiopaque marker in the bioabsorbable material taught by Stinson.

Claim Rejections - 35 USC § 112- Second Paragraph

The previous rejection of claims 54-60, 62, 66 and 67 under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention has been withdrawn in view of Applicants' amendment to claims 54 and 67.

Conclusion

Claims 54-60, 62, 66 and 67 are allowed.
